Art Unit: 2661

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American

Inventors Protection Act of 1999 (AIPA) and the Intellectual

Property and High Technology Technical Amendments Act of 2002 do

not apply when the reference is a U.S. patent resulting directly

or indirectly from an international application filed before

November 29, 2000. Therefore, the prior art date of the

reference is determined under 35 U.S.C. 102(e) prior to the

amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

2. Claims 1-25 are rejected under 35 U.S.C. 102(e) as being anticipated by Shiragaki (US 6,657,952).

Regarding claims such as 1, 12 it has been held that the recitation that an element is "adapted to" perform a function is not a positive limitation but only requires the ability to so perform. It does not constitute a limitation in any patentable sense. In re Hutchison, 69 USPQ 138.

-Application/Control Number: 09/843,021

Art Unit: 2661

Shiragaki discloses first and second rings (Fig 1, 11, 15), a first node (105, Fig. 11), a second node (108), a first media (e.g., protection/stand by/back up path from 105 to 108), a second media (e.g., working/active/extra path from 108 to 105), a third node (107), a third media (e.g., protection path from 108 to 107), a fourth media (working/active path from 107 to 108), a fourth node (106), a fifth media (protection path from 107 to 106), a sixth media (working/active path from 105 to 106), wrapping transit data back to third node (using protection/back up path from 108 to 107; faults can any where, Figs. 11, 15; summary), using fiber as a media (col. 4, lines 39-50; SONET), second fault (faults can any where, Figs. 11, 15; summary), add drop mux and multiplexing and demultiplexing host data with transit data (ADM, Fig. 1 and respective disclosure), intelligent protection switching data (using OAM cells, e.g., col. 5, lines 39-67), broadcast fault data (OAM cells are sent out in a broadcast environment, a ring which all stations listen to, e.g., col. 8, lines 1-14), a counter (using timeouts, cols. 13-14 or Figs. 13-14), counter is "operable to" adjust (go to zero) when data is not received (Figs. 13-14), detect idle frame (not further defined, reads on any frame, SONET frame or ATM or OAM cells, cols. 1-14), as specified in claims 1-25.

Art Unit: 2661

Any inquiry concerning this communication or earlier communications from the examiner should be directed to David R Vincent whose telephone number is 703 305 4957. The examiner can normally be reached on M-TH.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Douglas Olms can be reached on 703 305 4703. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
